

CELEBUZZ!

Botched Botox!
Top Plastic
Surgeon Ben Stong
Explains Kourtney
Kardashian's
Droopy Eye

Dr. Benjamin Stong from Kalos Facial Plastic Surgery in Atlanta noted her "left upper eyelid does appear to be drooping or ptotic. Botox injections can cause this if it migrates to the muscle that keeps the eyelid open," he explained. "It typically occurs by injecting too close to the muscle and using diluted Botox," **stated Dr. Stong.**
